WEATHER RECORDS

Alicja Kosak

WHAT WENT WELL

- I minimalised the code, and used 2html, 1JavaScript, and 1CSS for whole project.
- I added city searcher.
- I created universal methods for all the code.
- The page looks visually estetic.
- The code is fully functional, and it saves the data when the user switches tabs.

WHAT DIDN'T GO WELL

- Too much time on fixing mistakes in code. Especially when it comes to the order of the elements.

- Drawing chart for bigger amount of data.

- Limiting input/selection of data which caused page crash.

WHAT WOULD YOU DIFFERENT NEXT TIME

- Better commenting and organising JavaScript.

- Checking the order of code.

- If I had more time I would add bigger database for the pictures.

- Creating clearer fetching mehods.

- Simplifing code.
